

## Enhanced Features on BAPS at VHHH

The Airport Authority Hong Kong (AAHK) has enhanced some features of Business Aviation Parking System (BAPS) with effect from 28 Nov 2017 0000LT. Some notable new features are as follows:

### 1. Manual Input of ICAO Aircraft type

- Aligning BAPS with the OCS application format
- Standardizing the ICAO aircraft type designator

### 2. Revision of Arrival/Departure Slots UIDs

- Allowing applicants to revise the Arrival Booking Time with a Valid Arrival Slot
- Allowing applicants to extend the Departure Booking Time with a Valid Departure Slot or to be given one chance to extend to an Estimated Departure Time without a Valid Departure Slot (within 14 days)

### 3. Hangar Use Booking

- Accommodating to aircraft's maintenance needs by allowing applicants to select "Hangar Use" under "Booking Type"
- Allowing applicants to submit the "Hangar Maintenance Record Form (HMRF)" on BAPS

### 4. Split Booking

- Allowing applicants to split the original parking slot application into 2 new bookings. The 1st child booking would adopt the original arrival time and provide a new departure time, followed by the 2nd child booking with a new arrival time and the original departure time.

### 5. Overstay Information

- Adding the "Overstayed since [Date/Time]" label under the aircraft's "Application Details" on BAPS if it overstayed

With the enhanced features as noted above, aircraft operators and trip planners may have a higher flexibility as they schedule a flight to VHHH. Hong Kong Business Aviation Centre (HKBAC) will continue to work closely with the Airport Authorities to provide you a seamless travel experience at VHHH.
