

HKBAC is Taking Flight Toward a Greener Future with Sustainable Aviation Fuel (SAF)

The Hong Kong Business Aviation Centre (HKBAC) is proud to announce the upcoming launch of Sustainable Aviation Fuel (SAF) at our facility — a significant step forward in our ongoing commitment to sustainability and environmental stewardship in the aviation industry.

Effective from 1st May 2025, HKBAC will begin offering Sustainable Aviation Fuel (SAF) as part of our fuel supply services. This initiative marks a pivotal milestone in our mission to support a cleaner future, while continuing to provide the exceptional service and operational excellence that our clients have come to expect.

What is SAF?

Sustainable Aviation Fuel (SAF) is an eco-friendly alternative to conventional jet fuel, made from renewable materials like used cooking oils. It offers a practical solution to lower the carbon footprint without compromising performance. Now, HKBAC customers have the option to fuel their trips with blended SAF, contributing to a more sustainable future.

Why SAF at HKBAC?

As a leader in Fixed-Base Operator (FBO) services across Asia and beyond, HKBAC is setting a new standard by integrating SAF into our operations. This initiative not only reinforces our commitment to sustainability but also ensures that our customers continue to enjoy the seamless, high-quality service they expect.

"We are thrilled to bring Sustainable Aviation Fuel to HKBAC, marking a pivotal moment in our journey toward greener aviation. This launch reflects our leadership in driving innovation and sustainability, while supporting our partners and clients in achieving the environmental goals. Together, we are shaping a more responsible and forward-thinking business aviation sector," said Vivien Lau, CEO at HKBAC.

The introduction of SAF at HKBAC aligns with international efforts to decarbonize aviation and reinforces Hong Kong's role as an environmentally conscious aviation hub.

Ready to fly greener?
